Permanent Resident of Canada

Professional Summary

Senior Software Quality Engineer and Systems Builder with 20 years in IT, specializing in architecting end-to-end automation engines that deliver measurable business outcomes. I bridge the gap between complex development and operational efficiency by building scalable AI and automation frameworks that eliminate manual overhead by up to 100%. Beyond enterprise QA, I design custom autonomous agents and n8n workflows to solve real-world lead generation and internal operations challenges.

Technical Profile

- **Automation Platforms:** n8n, Custom Slack Bots, GitHub Actions, Jenkins.
 - **AI & Development:** Claude (LLM Skills/Tools Integration), .NET (C#), Node.js, TypeScript, Next.js.
 - **API & Data:** RESTful API validation, Jira API integrations, Data enrichment, SQL/Firebird.
 - **Testing & Ops:** Playwright, Cypress, JMeter, Microservices validation, High-compliance workflows.
-

Systems Built & Professional Experience

Independent Builder | Automation Side Hustle *Ongoing*

- Developed a custom AI-driven tool leveraging **n8n** and **Claude** skills to automate complex decision-making tasks and data processing.
- Engineered autonomous workflows that integrate third-party APIs to streamline lead processing and content distribution.

QA Consultant | TDS - Test Driven Solutions (Remote) *April 2025 – Present*

- Architected a universal automation engine using TypeScript to handle multi-lender mortgage workflows, achieving 100% coverage for high-compliance financial systems.
- Optimized API integration pipelines, reducing execution time by 62% and drastically tightening the feedback loop for mission-critical deployments.

QA Engineer | Betr Inc. (Remote) *May 2023 – January 2025*

- **Internal Operations Automation:** Built a custom Bug Tracker using **Next.js** and **Jira API**, cutting issue resolution time by 30%.
- **Security & Compliance Bot:** Automated 100% of user permission auditing by deploying a custom **Slack bot**, replacing hours of manual security checks with a push-button system.
- Validated system stability for high-frequency micro-betting via distributed performance testing, ensuring 99.9% uptime during peak loads.

QA Engineer | FansUnite Entertainment Inc. (Remote) *December 2021 – May 2023*

- Scaled end-to-end test coverage from 20% to 80% by implementing a custom Cypress and Java-based framework for business-critical features.
- Reduced regression testing time by 60% through the design and maintenance of automated suites.

QA Engineer | Curatio.me (Vancouver, BC) *July 2018 – December 2021*

- Developed automated mobile tests for iOS and Android using Appium, focusing on UI/UX and mobile release cycles.

System Analyst / Software Developer | Adapcon (Brazil) *April 2002 – June 2016*

- Developed features and maintenance procedures for ERP systems in the manufacturing and finance sectors using Borland Delphi and Firebird.

Education

- **Web Development & Mobile Applications:** Cornerstone Community College, Vancouver.
- **Bachelor's in Business Management:** Senac Brasil.
- **Information Technology:** Nova Era, Brazil.
